## BENTLEY SYSTEMS INTERNATIONAL

Bentley Systems provides software for sustaining utilities' infrastructure from plant to point of service. Utilities use the Bentley solution in network engineering to map, design and engineer transmission and distribution networks, and to design, build and maintain substations and power generation plants. Advanced information management capabilities complement our engineering and operations products via Bentley's ProjectWise and AssetWise product lines.

## DT JOINTINGSOLUTIONS

DT Jointing Solutions was proud to co-exhibit with Cooper Power Systems by Eaton at the recent 2016 ENA event, held in Adelaide. DT Jointing Solutions continues to supply only the highest quality in MV cable accessories, showcasing a comprehensive range of separable connectors, joints, terminations, tooling, inner cone solutions and fault indicators to suit Australian and New Zealand markets. We also have a complete workshop facility to custom-make cable leads of any description. Our design team is able to discuss your next project today.

## EA TECHNOLOGY

EA Technology provides solutions to help improve the reliability, safety and lifecycle economics of energy networks. We understand electricity networks from the assets up and we have tried and tested techniques to help prevent failure, optimise investment decisions, improve operational practice and deploy new solutions to meet the challenges of tomorrow.
