ENERGY NETWORKS 2014

PROTECT YOUR ASSETS AND YOUR PEOPLE

Network protection is imperative. This is why DT Jointing Solutions is committed to supplying only the highest quality in MV cable accessories to the Australian market.

Cable management and, in particular, supporting and retaining cable, must be considered for every occasion. Unfortunately, however, it's often a company's last concern.

DT Jointing Solutions is fortunate enough to offer both the stainless steel Cooper B-Line range of cable cleats and also a range of polyamide units that complement each other perfectly; providing options to suit all instances and budgets.

The Cooper B-Line cable cleats are IEC Tested. Available in single or trefoil (even 4 Core on occasion) configuration, the cable cleats help avoid downtime caused by short circuits, are easy to install and come with a variety of fixing options.

Not all projects require such a high degree of protection, however, and it's in these instances DT Jointing Solutions' Polyamide Clamp becomes an obvious choice.

Light, easy to use and very affordable, the clamp is available in large range of designs. What's more, the Polyamide Clamp is 1a rated – resistant to UV, ozone, oils and alkalis.

For unparalleled high-level protection, the stainless steel cleats and Polyamide Clamps are a must have. Contact DT Jointing Solutions for more information or visit its stand at Energy Networks 2014.

New Horizontal Switchgear

The Assure range

- IEC62271-200 A-FLR, 31.5kA, 1s
- 31.5kA STC rating standard
- 17.5kV design
- 1250A panel in 600mm width
- 2000A panel in 800mm width
