

SIMULTANEOUS EV CHARGING

FIMER FLEXA AC Station is the perfect solution for any application. The charger can charge two electric vehicles simultaneously with 2 x 22kW T2 sockets. Designed and manufactured in Italy, the FLEXA AC Station has a stainless-steel casing that offers robust protection with IP54 and IK10 certifications. Depending on the site's requirements, different communication configurations (including OCPP 1.6 J20) are available, and the option to customise the charger's branding. Contact FIMER to learn more about its EV charging solutions.

ABRASION MADE EASY

No more issues abrading round cables with a flat brush. Flexible straps with steel brush bristles are now available from DT Jointing Solutions. Tough, long-lasting, easy to use, easy to clean, highly abrasive, and resistant to rusting, this solution is ideal for the abrasion of cable sheaths, cleaning copper or aluminium conductors, including overhead lines, polishing metal surfaces or abrading plastic. Contact DT Jointing Solutions for more information.

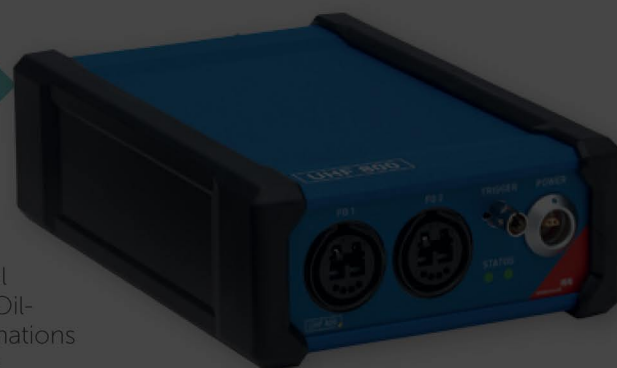

GUIDE TO DATA CENTRE SUSTAINABILITY

Vertiv has launched its *Guide to Data Centre Sustainability*, a new resource that helps the industry crack down on carbon emissions and water use as a new sense of urgency to reduce environmental impact kicks in. The best practice guide provides direction on the business case for reducing environmental impact, as well as how technology is evolving to increase equipment utilisation and drive out remaining inefficiencies, phase out water-intensive cooling technologies, and decrease dependence on carbon-based energy sources. Contact Vertiv for more information.

UHF PD MEASUREMENT SYSTEM

OMICRON latest UHF 800 system is a modular solution to perform sensitive offline and online partial discharge measurement and analysis using Ultra-High Frequency ranging from 100 to 2,000 Mhz to ensure there is no interference from external noise. It can be used on Gas-Insulated Switchgear, Oil-filled power transformers, High-voltage cable terminations and can be operated as a stand-alone system or be combined with the MPD 800 PD system in the same setup. Contact Omicron for more information.

NEW OSM RECLOSER

International Electrical Engineering firm NOJA Power has taken released a new entry level OSM Recloser rated to 15 kV, 630 Amp continuous current. The new OSM15-630-12-310 enters the product line below the OSM15-800-16-310, offering cost savings for lower load applications. The new OSM15-12-630-310 Recloser is compatible with all current generation of NOJA Power RC Series Controls. For more information contact your local NOJA Power Distributor.
