

**TRUE LIFESAVER**

CellAED is designed to save lives from sudden cardiac arrest. An arrest can happen to anyone, anywhere, at any time. When sudden cardiac arrest happens, your heart stops pumping blood. Within seconds, people experiencing cardiac arrest fall unconscious. At that point, you have only minutes for someone to save your life. To save you, someone nearby needs to call emergency services, start CPR, and apply an automated external defibrillator (AED). An AED can coach people to provide CPR and provide a small electrical shock to the heart to start it beating normally again. With CellAED, you can ensure there is always an AED nearby to help save your life, or the life of someone else, when sudden cardiac arrest happens.

**WELL-ROUNDED SOLUTION**

Introducing the Kable Protection Insert by DT Jointing Solutions (DTJS), a solution tailored for electrical and telecom infrastructure. Designed by DTJS jointers and sparkies, this insert fits 100mm or 150mm conduits, eliminating sharp edges and creating a rounded edge to prevent damage to cable sheaths. The KPI is versatile, suitable for new projects and retrofitting existing installations. Its core material provides critical protection to all equipment at risk. Contact DTJS for more details on how the Kable Protection Insert can enhance the longevity and functionality of your electrical and telecom setups.
